## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 15-30 are rejected under 35 U.S.C. 103(a) as being unpatentable over Schoch (US 2003/0052690). The reference discloses an estimator of the state of charge wherein the model is a battery model and the arrangement for calculating the error between the battery and the model. Applicants' use of terminology is broadly interpreted and would have been obvious to one of ordinary skill in the art to have applied an appropriate model to determine the state of charge.

### ***Response to Arguments***

Applicant's arguments filed 11/23/07 have been fully considered but they are not persuasive. Applicant contends that the reference does not disclose the claimed invention. In general, Applicant's claimed structural limitation is so broad and the terms are too general. Examples are "state variable," "mathematical submodels," "working range," "parameter estimators," "operating variable" and "ascertaining the error." These terms can be interpreted in different ways.

Art Unit: 2838

Applicant's arguments with respect to claims 15-30 have been considered but are moot in view of the new ground(s) of rejection. The 101 rejection is no longer applicable to claims 15-23.
